FROM THE UK'S LARGEST MANUFACTURER OF SCREENLINE® INTEGRAL BLINDS

C System Venetian blind

The ScreenLine venetian blinds, SL20C designed for use in double-glazed units, are manufactured in accordance with high technical specification and production standards.

The slat raising, lowering and tilting function is achieved using a rotational magnetic transmission through the glass thereby guaranteeing the unit's hermetic seal.

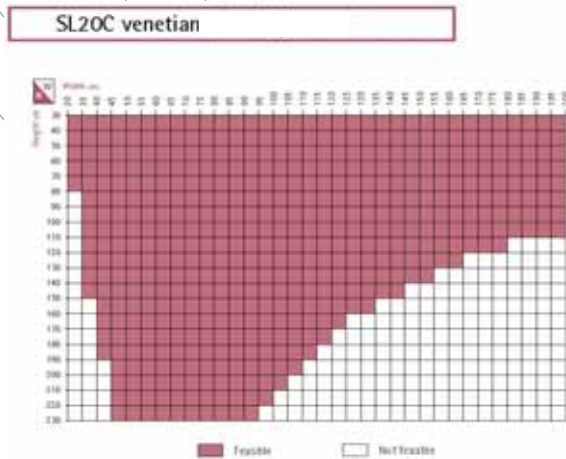

The external magnet, fixed to the internal glass by double-sided high performance adhesive allows perfect alignment with the internal magnet.

Raising and lowering is controlled using a continuous cord loop that drives the external magnet. The cord is held lightly under tension by a cord tensioner, rotational knob or wand on the glass directly below the external magnet.

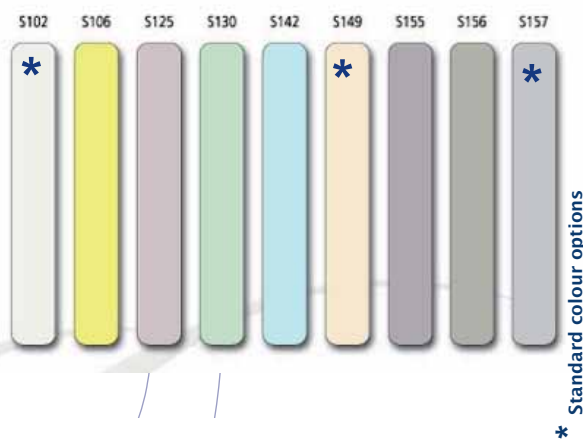

Maximum overall area: 2.2m for domestic blinds
 Maximum area: see feasibility tables
 Blind stack height: 4.0% of height + 45 mm

The UniBlinds® system at work....

The products we manufacture are designed to maximise your options for light and shade control, to enhance the feeling of space, or to provide total privacy.

Our aim is to achieve the correct balance between the internal and external environment, and it is with these factors in mind that we apply our experience, knowledge and research.

The UniBlinds® system has many applications within both commercial and domestic settings:

- Suitable for all vertical window applications
- Ideal solution for conservatory shading
- Total privacy and light control for folding sliding doors
- Gives excellent utilisation of partitioned office space
- Suitable for retro-installation into existing frames

For more information on our full range of unique products, please visit www.morleyglass.co.uk

Any UniBlinds® product can be enhanced with high performance Saint-Gobain glass from our extensive portfolio.
